

Water Meter Reading Schedule & Billing Change: Effective Month, 2020

With the conversion of electric meters to AMI, MPU no longer needs to manually read electric meters going forward. In order to keep costs low for all customers, MPU will be reducing the number of times small water meters (1" and smaller) are read from monthly to every other month. Several utilities across the state read water meters on schedules other than monthly, some quarterly and some even every six months as allowed by the Public Service Commission of Wisconsin.

In order to minimize the billing impacts of this change, MPU will be estimating water consumption in the months meters are not read by the following methods:

1. Usage is estimated as the same time last year, if customer has been at the location for at least one year. If not,
2. usage is based on an average of the previous 6 months if a customer has been at the location for at least 6 months. If not,
3. usage is based on the customer's last bill or, if it is a new customer, the usage will be set to 1 unit.

Customers will see a true-up on their following bill with the actual meter reading for the two month period adjusted by what was estimated. The following discusses the estimation and true-up process along with sample bills:

- Customer X's meter was read on March 9 for prior month consumption. The customer used 4 units of water and was billed for 4 units.
- Next month, on April 13, Customer X's water consumption was estimated to be 4 units based on historical data. Customer X is billed 4 units of water for March. See sample bill below on left. The current reading is set to 142 (up from the prior 138) to account for the 4 units of water billed.
- Next month, Customer X's water meter was read on May 8 and showed 144 units, which is 2 more than the amount estimated on the last month's bill (142). Customer X will be billed 2 units of water consumption. Over the 2-month cycle that includes the estimate, Customer X has paid for 6 units of metered water, with the first 4 estimated. See sample bill below on right.

Note—MPU bills water consumed in cubic feet. 1 unit of water equates to 748 gallons.

Estimate Bill Information:

A—Any estimated bill is required to be denoted as such.

B—This section shows the last meter reading and date of read.

C—This section shows the current meter reading (which is estimated to be 4 additional units from the last actual read).

D—Denotes the consumed units for billing.

E—Details charges for water usage.

If you have any questions regarding this change, please contact MPU at 920-683-4600 or by email at MPUCustomerService@mpu.org.
