Water Main Break Causes Low Water Pressure

Residents and businesses on Manitowoc's southeast side may have noticed low water pressure Wednesday evening, following a water main break in Silver Creek Park.

At 8:15 PM, water plant operators were alerted with low system pressure alarms. A passerby reported seeing the break in Silver Creek Park, where crews found a 24" main had fractured. The leak was isolated and pressure restored at 9:45 PM.

Water crews are presently repairing the leak. Customers may have experienced discoloration of water due to changing flow in the system. If residents notice this, they should run their cold water tap for a few minutes until the discoloration clears.
